

Using Django Forms, continued

- Copy your solution from Monday to today's directory
- Update the Models registration sample solution to use Django Forms.
 - For each action (`create_student`, `create_course`, `register_student`):
 - Create a new form in `forms.py`.
 - Focus on necessary validation within your forms.
 - Modify the action in `views.py` to use the form.
 - Optionally, modify `templates/sio.html` to use the form.
- Update to use `ModelForms`
- Demonstrate more advanced validation:
 - Add a telephone field to your Student model, require field to be in the format (555) 555-5555.
 - Add a zip code field to your Student model.
