

Using Ajax in jQuery

1. Modify `static/sio.js` to generate an Ajax GET request to `/sio/get-courses` to get all the courses
 - a) Generate an Ajax GET request to our API.
 - b) Use our JavaScript helper function to update the DOM using the result of the API call.

Using Ajax in jQuery

1. Modify `static/sio.js` to generate an Ajax POST request to `/sio/create-student`, `/sio/create-course`, and `/sio/register-student` with the data from the respective form.
 - a) Extract data from the HTML form to create a JavaScript object representing the form data. Hint: There is a jQuery helper function that will do this for you.
 - b) Generate an Ajax POST request to our API based on the form data.
 - c) Use our JavaScript helper function to update the DOM using the result of the API call.
